The US Department of Energy

This agency is commissioned by the US Senate to manage the energy usage in the US. They have the latest information about; gas prices, energy tips, press releases and educational information. All of this information is readily available for public use 24 hours a day on their website. Some of the things that they have that is useful for the public is the gas tracker. It allows people to report unusually high prices or to find out how to get cheap gas. There is a section on nuclear energy and on the Global Nuclear Energy Partnership, an area for users to find the latest information on the progression on information in nuclear energy and technology.
